

Pro-Environment Polska Ltd. is a leading distributor of analytical instruments, accessories and consumables for the chemical, pharmaceutical and environmental sector.

Acting as an authorized distributor of PerkinElmer Inc. for Poland, we ensure the continuity and development of almost 30 years of business in Poland, combining the experience of a global corporation with the "agility" of a locally operating company.

Cooperating with laboratories of commercial companies as well as scientific institutions and by conducting our own research and development activities, we remain close to the world of science and the latest technological solutions.

When planning the development of the company, we decided to implement a quality management system based on the requirements of the ISO 9001:2015 standard for the **distribution of analytical instruments for laboratory analysis**.

Bearing in mind the needs of our organization and the needs of our business partners, we commit ourselves to:

- Continuous improvement of the quality management system,
- Increasing customer satisfaction by systematically improving the quality of services, including shortening delivery times and reducing the number of complaints,
- Identifying and meeting the applicable requirements
- Optimizing the financial conditions of handling orders,
- Building long-term relationships with major business partners by creating transparent processes

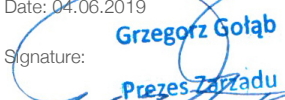

Our goal is to build a self-learning, scalable organization that provides a transparent and friendly work environment, and to increase our business and the business of our partners.
